ENC-2 ENCODER ASSEMBLY (PAPER DRIVEN)

For

USE WITH ALL VERSIONS OF *S.P.I* PUMP SYSTEMS

The ENC-2 Paper Driven Encoder is designed for use with all types of *S.P.I.* Pump systems. The encoder mounts on the front face of the cigarette or filter making machine, in place of or additional to an existing paper diverting roller. This encoder produces 500 pulses/rev. When this encoder is used in conjunction with the *S.P.I.* range of PC-1 or 2 or 3 Pump Controllers, the need to change the product length within the controller is eliminated when making product size changes.
