## **LDA-1SYSM**

### **LIQUID DISPENSING APPLICATION for CIGARETTE MAKING & FOIL REWINDING M/Cs**

The LDA-1 system has been designed to apply liquid flavours (heated or cold) directly onto the cigarette paper on cigarette making machines, or to the tissue side of the foil on rewind modules. The system will apply a uniform application of flavour that is proportional to machine speed at a resolution of 0.01mg/cig

#### **Main Features**

- Latest technology microprocessor control system for all functions.
- Remote Control Unit available.
- Heated or cold versions available to suit flavour.
- Automatic calibration and bleed facilities.
- Permanent or portable tank units available.
- Flexible or semi rigid heated hoses available.
- Pre-Melt units available (for high flavour consumption)
