

SOUTHLAKE CORP

PC-2 DUAL PUMP CONTROLLER

The PC-2 Dual Pump Controller has been designed specifically for controlling the SPI Adhesive Dual Pump Assembly APM-2. Operator interface is via the large LCD touch screen for accessing and changing any of the running or machine settings. Giving automatic synchronized speed control of both pumps to machine speed.

The unit is fully sealed and is cooled externally to eliminate the possibility of any dust or carbon granules from entering into the control boards.

Main Features

- 0.01 Grams incremental flow adjustment for each pump .
- Fully sealed against dust and dirt or carbon granules.
- Rugged construction.
- Rear connections for input signals & outputs for pump.
- Wide operating voltage.
- Other Versions are available Incorporating temperature control & logic for automatic rod heaters.
