RH-1

AUTOMATIC SEAM ROD HEATER for MOLINS DAPTCM MACHINES

The RH-1 Rod heater has been designed specifically for the Molins DAPTCM machine to improve sealing of the filter seam coupled with fully automatic operation for up and down motions. Normally two heater assemblies (each 240mm long) are fitted to the machine to give 480mm length of heater surface exposed to the filter. This allows the heaters to be run at lower temperatures, thus producing a better quality filter.

Main Features

- Fully pivoting automatic pneumatic raise & lower operation.
- High wattage concentration 4W/mm
- Full micro adjustment facility for alignment to rod.
- Fast response sensor & heaters.
- Mounts directly onto existing machine location slots.
